2016 Dried Skimmed Milk (DSM) Programme

The Swiss Government regularly supports the operations of the World Food Programme (WFP) of the United Nations in the Democratic People's Republic of Korea (DPRK) through donations of dried skimmed milk (DSM). The WFP processes the DSM in local factories along with other ingredients such as cereal, corn, soy and rice to blended vitamin enriched food for distribution to children and pregnant and lactating women.

WFP produces three different types of Super Cereals (blended food) containing Swiss DSM: Corn Soy Milk, Cereal Milk Blend and Rice Milk Blend. Although only 5-25% of these Super Cereals consist of DSM, the financial value of the DSM amounts to 36-72% of the final product. Switzerland is the only in-kind donor and thus main supplier of DSM in the DPRK, an important contributor to the blended food production. Adding protein-enriched foods to diets of young and moderately malnourished children is hugely important for improving growth and physical recovery. Therefore, the blended food products of the WFP containing Swiss DSM make a significant nutritional contribution to the diet of the demographic target groups.

Under-nutrition is especially damaging to children. It deprives children of essential nutrients that are required during their most important period of growth, creating permanent and irreversible physical and mental damage. Undernourishment among women has a major impact on maternal mortality. Low-birth-weight babies are four times more likely to die in the first week of life from infectious diseases and may suffer from immune and developmental deficiencies, including chronic diseases later in life.

As a means of combatting under-nutrition, the Super Cereals are distributed to young children in institutions such as baby homes, nursery schools and hospitals and to pregnant and lactating women in households. Rice Milk Blend is the product containing most DSM. It is a highly nutritious and digestible product used for moderately malnourished children in paediatric hospitals and wards as supplementary food for rehabilitation.

The Swiss DSM reached over 900'000 beneficiaries through the channels of the WFP in 2014. SDC has donated DSM worth CHF 36'460'800 to the WFP in the DPRK since 2009, accounting for more than 60% of SDC's total budget for the DPRK.

Background Information

The DPRK has faced regular severe food shortages in the past. A generally satisfactory situation in the mid-1980s deteriorated markedly, eventually leading to catastrophe

in 1995, when the DPRK government was forced to appeal to the international community for assistance for the first time. In response, SDC started donating food to the DPRK and opened a programme office in Pyongyang in 1997.

More than 16 million people receive food rations from the state controlled Public Distribution System (PDS), which has been in place for many decades. At the beginning of the PDS, the government's target for the daily rations included up to 900 g of grain per working adult. This amount has been repeatedly reduced since the 1970s. In the past four years the daily PDS rations averaged at less than 330 g per adult. According to WFP, in 2014 81 per cent of households surveyed had inadequate food consumption..

Budget

Year	Budget CHF	kg of DSM
2016	4'572'000	1'200'000
2015	5'483'400	1'050'000
2014	5'491'400	1'050'000
2013	4'500'000	900'000
2012	4'001'000	825'000
2011	3'906'000	800'000
2010	5'078'000	1'000'000
2009	3'429'000	625'000
